

Are you a physiotherapist who wants to update ICU skills to care for COVID-19 patients?

Watch the webcast now.

Search for **Webcast Virtual Cardiorespiratory ICU training**

As NSW Health ramps up its response to the current health crisis, physiotherapists will be deployed to provide specialised care to patients with COVID-19. This webcast recording will help you update your skills to work with cases of COVID-19 and ventilated patients.

NSW Health and the Australian Physiotherapy Association (APA) have partnered to provide important training for hospital physiotherapists working to combat COVID-19.

The webcast recording and training resources combines key topics from the Cardiorespiratory Physiotherapy Level 2 - ICU course. It incorporates COVID-19 respiratory management based on:

- Australian and New Zealand Intensive Care Society (ANZICS) COVID-19 Guidelines and the latest ANZICS-COVID-19-Guidelines
- COVID 19: Respiratory Physiotherapy On Call Information and Guidance from NHS.
- Physiotherapy management for COVID-19 in the acute hospital setting: Recommendations to guide clinical practice.

For Physiotherapists external to NSW Health, the recording and resources are available for free via **HETI Moodle**.

Disclaimer: This training was developed for NSW Health in line with NSW guidelines, policies and protocol. Other states and territories will need to consider the applicability of this training under their local policies, governance and regulations. This training does not credential staff to work in ICU. Local procedures and credentialing to function effectively in ICU is required following this training.
