

# Did you know that nurses can apply plaster backslabs in the emergency care setting?

The Plastering education program has been designed for nurses to increase their knowledge and skills when providing care and treatment for a patient with a limb injury. The program supports the development of clinical assessment and plaster backslab application skills in the emergency care setting.

The Plastering education program includes the eLearning module, local face-to-face workshop and capability assessment.

The aim of the program is for you to be able to:

- Perform a limb assessment and identify the indications for plaster backslab immobilisation.
- Demonstrate plaster backslab application techniques for common fractures.
- Document findings of clinical assessment and plaster backslab application for limb immobilisation.
- Provide patients, carers and families with education following plaster backslab application.

Plastering provides pain relief and protection.
