

Are you assessing wounds holistically to optimise person-centred care?

Holistic wound assessments support safe, person-centred care and improve outcomes. This module supports you to recognise wound types and healing stages and apply a holistic approach to wound assessment to guide care and make appropriate referrals.

Using practice activities and a scenario, this module outlines how you can:

- identify stages of healing and common wound types
- apply a person-centred, holistic approach to wound assessment
- recognise when to escalate and refer wound care to optimise outcomes.

Holistic wound assessment optimises care.

Are you using wound management interventions that optimise outcomes?

A person-centred approach to wound management improves outcomes. This module supports you to identify factors impacting healing and apply stage-appropriate interventions. Learn how to document wound management and recognise and respond to wound deterioration or delayed healing appropriately.

Using activities and scenarios this module outlines how you can:

- identify stages of wound healing and factors that impact healing
- apply appropriate interventions for wound management
- recognise wound deterioration, delayed healing and when to escalate and refer care
- identify the essential components of documentation for wound management.

Effective wound management optimises outcomes.
