

# Can you recognise and respond to postpartum haemorrhage, uterine inversion or maternal collapse?

Postpartum haemorrhage, uterine inversion and maternal collapse are maternity emergencies that can lead to a woman rapidly deteriorating. Understanding the physiology behind these emergencies and knowing how to respond can improve outcomes for mothers and babies.

Through the use of scenarios, job aids and practice activities you will:

- identify the risk factors and recognise signs of deterioration from postpartum haemorrhage, uterine inversion and maternal collapse
- respond to, escalate and manage these maternal emergencies including post-emergency care
- recognise the impact of human factors and identify strategies to improve care and reduce adverse outcomes.

**Recognise. Respond. Identify.**
